

Construction Management

LTE is a leader in providing construction and management services for environmental projects nationwide.

Turnkey design/build services ensure projects meet budgetary, regulatory and performance expectations.

Client-focused team of design engineers and construction managers limits client risk and reduces costs.

Construction managers are experts in remediation system installation, whether using in-house technicians or providing oversight of installation contractors.

Stormwater Management Controls

Methane Mitigation Programs

Remediation System Installation

Environmental Safety Oversight

Contaminated Material Management

Stormwater Management Control

- Best management practices
- Hazardous material storage facilities
- Stormwater collection & treatment
- Certified erosion control supervisors

Manufacturing Facilities – Texas

Methane Mitigation

Explosion Investigation - Colorado

- Residential and industrial detection systems
- Methane monitoring for oil and gas production fields
- Active and passive subslab depressurization systems
- Landfill methane collection systems
- Residential water treatment systems

Remediation System Installation

Soil and Groundwater Remediation System - Indiana

- Design/build projects
- In house installation crews
- Startup and decommissioning
- Installation contractor oversight

Environmental Safety Oversight

Construction Projects Nationwide

- Land development projects
- Transportation (light rail/highway)
- UST installation

Contaminated Material Management

Wastewater Treatment Plant - Colorado

- UST/AST Facility Closures
- Solid, hazardous, & universal waste removal & disposal
- Contaminated soil segregation & disposal
- Asbestos-impacted soil segregation
- Impacted groundwater treatment & disposal
